

Automatic Chamfering Machines

Single or Double Ended Fully Automatic Systems!

Do you have an application that requires chamfering? Would you like to be able to offer pre-chamfered bars? **The J.F. Berns Company** has over 20 years of experience in manufacturing chamfering equipment and have manufactured over 1000 chamfering machines. We offer manual, semi-automatic, and fully automatic chamfering systems. If a standard product does not meet your needs, we can design one to suite your specific application.

Automatic Systems

Face & Chamfer Tool with clamp

Finished bars on ramp

This machine will chamfer & face both ends of steel bars. It will run 9-17' long bars and the bars can vary +/- 2" within a particular size. The diameter range is from 1/4" to 2.0".

Automatic Systems are designed to meet your exact requirements. Speeds will vary depending on the type of machining, bar material, bar size and depth of cut, but generally cycle times will be in the 5-15 second range. Call with your specifications and in most cases we will be able to give you a price on the phone.

Features

- Rugged proven designs
- Designed with ability to chamfer, face, center-drill & more
- Designed with ability to run hex and other shape bars
- Flexible design to suite your application
- Quick cycle times

We also design and build automation equipment for other applications. Our expertise is not limited to chamfering, we have special machines in many different industries. Give us a chance to quote your special machine design application!

Standard Products

We also offer standard, more economical, manual and semi-automatic bar chamfering machines. For more information on these products and also on our special machinery, visit us on the web at: **www.jfberns.com**
